OPIOID STEWARDSHIP

With the Joint Commission’s new audit requirements, Sentri7 now provides evidence-based tools to improve real-time management of opioids in the inpatient setting. This includes the ability to track and change opioid agent selection, receive real-time alerts to support care delivery for opioid use, analyze prescribing patterns across facilities and access to turnkey reporting to comply with state requirements.

What’s New at ASHP Midyear 2019

WHAT’S NEW:

Sentri7’s Antimicrobial Stewardship Initiative Just Got Better

CMS finalized its regulations that require U.S. hospitals to implement Antimicrobial Stewardship Programs (ASPs) in September. That announcement was on the heels of a recent CDC report1 showing approximately 30 percent of antibiotics used in hospitals are still unnecessary. There have been significant advancements in ASP, but more opportunities remain for hospitals to improve performance. That’s one reason Sentri7 now offers enhanced Antimicrobial Stewardship rules content, analytics, antibiogram and AU/AR reporting, as well as new benchmarking capabilities.

STANDARDIZED ANTIMICROBIAL ADMINISTRATION RATIO (SAAR)

If your facilities have submitted antimicrobial use (AU) data to NHSN in the past, Sentri7 makes it easy for your team to review SAAR for your hospital in the Antimicrobial Stewardship (ASP) analytics dashboard.

Now you have one source for all the data you need to inform decision-making and drive continuous improvement for your hospitals’ Antimicrobial Stewardship program—to save time and improve your hospitals’ performance.

WOLTERS KLUWER INNOVATION

Applying AI technology to predict \textit{C. difficile} infections to improve patient outcomes & hospital performance

As a part of a sophisticated and enhanced AMS initiative in Sentri7, we are developing a model that will identify patients at risk of \textit{C. difficile} and alert you to assess their care. By applying machine learning and AI to important clinical issues, Wolters Kluwer is helping hospitals predict \textit{C. difficile} infections earlier so patients, patient families and hospital staff can be protected from the spread of this deadly hospital-acquired infection—improving patient outcomes, hospitals quality and overall financial performance.

This is the first of many predictive models that will be available in Wolters Kluwer solutions and we are excited to validate and refine these tools.

Simplifi 797\textsuperscript{®} USP Compliance

Reimagined on the SoleSource\textsuperscript{TM} platform, Simplifi 797 provides an enhanced user experience, workflows and analytics to improve compliance confidence with USP <795>, <797> and <800>.

WHAT’S NEW:

Streamline System Standardization and Documentation

STANDARDIZE TO IMPROVE SAFETY & ACCURACY
Empower your team with centralized management of policies and procedures, competency management and sign-offs, and site reports that roll up to a system-level view.

These tools help to remove variability from your compliance processes, creates efficiencies for your teams and helps to ensure compliance confidence with USP <795>, <797> and <800> across facilities.

IMPROVE OVERSIGHT OF OPERATIONS WITH NEW MASTER FORMULATIONS AND COMPOUNDING RECORDS
Our new Compounding Records Module for sterile and non-sterile compounding standardizes recipes and easily supports batch compounding documentation and labeling—saving time, removing manual processes and ensuring the accuracy of the documentation.
